Everyone
 online,
**Everyone
 benefits**

This project has received funding from the European Union's Seventh Framework Programme for research, technological development and demonstration under grant agreement no 610510.

The Challenge

Over 2 billion people worldwide have different types, degrees, or combinations of disability, literacy, digital literacy or aging related barriers that impede or prevent use of ICT (Information and Communication Technology).

Not long ago you could live without access to ICT quite well. However today access to ICT is required for most education, employment, and commerce, and is increasingly required for travel, health, safety, daily living and participation in most of our society. Yet we currently only reach 3 to 15% of these – in developed countries. We cannot socially, economically or politically afford to have this cumulatively large percentage of our society offline going forward. Yet there is no way to reach them with our current model.

Prosperity4All (*Ecosystem infrastructure for smart and personalised inclusion and PROSPERITY for ALL stakeholders*) is a 4 year project that will bring a holistic design approach to create an infrastructure that will allow an ecosystem to grow, one that helps generate the rich milieu of options needed to bring a diverse population of populations into the digital future.

One-size-fits-one digital inclusion.

The Solution

To create an inclusive infrastructure will allow an ecosystem to grow that can profitably serve markets as small as one, at a personally and societally affordable cost.

P4A will use cloud, crowd, game and smart technologies, to bring new players with both low and high technical skills into the development and delivery ecosystem, introduce accessibility as a ubiquitous service, and combine auto-configured access features built into mainstream products with assistive technologies and services to create the rich milieu of options needed to bring this diverse population of populations into our digital future.
